

THE CLOUD PLATFORM
REINFORCED DIGITAL ASSURANCE

BAR CIRRUS

BAR Cirrus: The cloud platform for digital assurance

BAR Cirrus is the cloud platform for steel reinforcement and accessories developed by the British Association of Reinforcement (BAR). It provides a digital route for reinforcement traceability from steel manufacture, to fabrication and then delivery to site.

The tool fully embraces the 'Golden Thread' of information that was recommended by Dame Judith Hackitt in her report 'Building a Safer Report' which was published in the wake of the Grenfell Tower fire disaster. The Golden Thread refers to the vital flow of information that should be readily available. BAR Cirrus offers the digital traceability of product provenance and quality assurance that meets the requirement of the Golden Thread. Importantly, it ensures that reinforcement specification is fit for the digital age.

BAR Cirrus the digital route to reinforcement:

Traceability

Provenance

Assurance

Importantly, the data held by the BAR Cirrus cloud is owned by the reinforcement customer and supplier. No project data is held by or used by a commercial third party. It has been developed by the industry for the industry.

This is a digital tool developed by the industry for the industry. Its development has included a full review by customers and suppliers to ensure relevance, functionality and safeguards against the data being compromised. All GDPR Regulations are conformed to.

A very important objective for BAR throughout the development of the APP was that customers and BAR members could use the APP without any annual subscription fees. For BAR members there will only be a maintenance and set-up fee, contact the BAR office to determine fee rates. For non-BAR members there is an annual subscription and maintenance fee together with an initial set-up fee, contact the BAR office to determine fee rates or to become a BAR member.

**Developed by the industry for the industry.
No cost to reinforcement customers.**

BAR Cirrus: Functionality

Ease of use is fundamental to the functionality of BAR Cirrus.

There are easy to follow steps to accessing the required data:

customer sign-in

select reinforcement
supplier

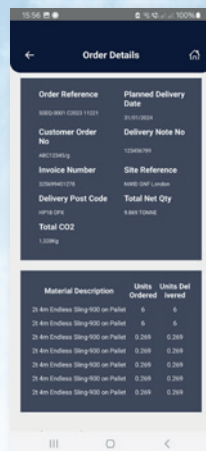

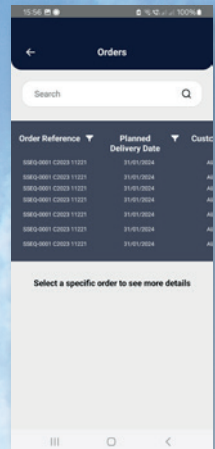

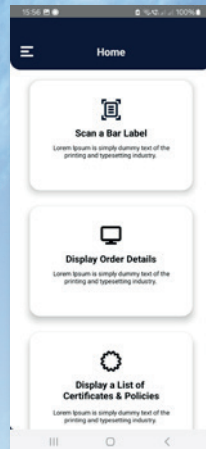

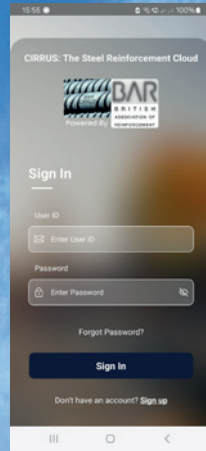

display list of current
orders

access required
reinforcement cast, bar
mark, certificate, project
order or delivery data.

You can even scan a
barcode from a rebar label
on site.

Download available from the
Google Play Store or Apple Store
